The 12.1megapixel resolution and 4x optical zoom with Optical Image Stabilizer ensure radiant, detailed images. Plus, you've got an advanced DIGIC 4 Image Processor with evolved Face Detection Technology and the Face Detection SelfTimer for extraordinary control and performance. Smart AUTO lets you handle challenging conditions with ease. PowerShot A1100 IS Highlights 12.

1megapixel resolution, 4x optical zoom and Optical Image Stabilizer With the PowerShot A1100 IS, dramatic, personal pictures have never been easier to shoot and share. This 12.1megapixel digital camera lets you create impressive large photos of family and friends you'll be proud to display. The

highresolution images taken by the PowerShot A1100 IS can be enlarged up to 13 x 19 inches. The PowerShot A1100 IS has a 4x optical zoom lens that makes it easy to get the inspiring, emotive closeups that will make your images lasting keepsakes. This magnificent lens gives you the power to shoot distant subjects with razorsharp precision and stunning lifelike color. So you can brilliantly capture a closer shot of a landscape, or a child's big smile. The PowerShot A1100 IS is equipped with Canon's acclaimed Optical Image Stabilizer Technology that automatically detects and corrects camera shakeone of the leading causes of fuzzy or blurred shots. Even when zoomed in, you can get the steady, crisp, brilliant images you'll be proud to shoot and share. And Canon's Optical Image Stabilizer Technology is so convenient to use. It functions perfectly with or without a flash. A World of Advantages with Canon's Technology The DIGIC 4 Image Processor has evolved Face Detection Technology that tracks the faces of moving subjects and lets the shooter enter the frame seamlessly with the Face Detection SelfTimer. DIGIC 4 Image Processor Canon's most advanced image processor, DIGIC 4, delivers evolved Face Detection Technology that keeps every face in every photo looking its very best. The technology finds and tracks the faces of moving subjects until you're ready to shoot, then delivers perfect focus. In addition, exposure, flash and white balance are compensated, so that faces exhibit natural skin tones and backgrounds are properly exposed.

Using an internal database of thousands of different photos, iSAPS works with the advanced DIGIC 4 Image Processor to improve focus speed and accuracy, as well as exposure and white balance. A Face Detection SelfTimer automatically detects an increase in the number of faces and makes the appropriate adjustments. For instance, to include the photographer's face in a group shot, there's no need to rush in. Just put the camera on a stand or tripod, specify Face Detection SelfTimer, and the camera will wait for the photographer's face to get oncamera before it takes the shot. Motion Detection tracks moving subjects in a much larger rangeallowing you to wait for the perfect shot without refocusing. Intelligent Contrast Correction DIGIC 4 also makes possible the iContrast Intelligent Contrast Correction system, which controls the compensation level in pixel units to brighten dark areas while leaving bright areas unchanged for better images where the main subject is dark, and more natural transition. The PowerShot A1100 IS can even use iContrast in playback mode to adjust images that were shot without the setting activated. Redeye Correction provides three options for removing redeye from subjects in flash pictures. 1 Redeye Correction during shooting actually identifies and corrects redeye in human subjects as pictures are taken. 2 The PowerShot A1100 IS can be set to automatically detect and correct redeye during image playback. 3 You can manually locate any red eyes in a scene during image playback on the LCD screen, and command the camera to remove them. Life doesn't give you second chances to capture special times. That's why the PowerShot A1100 IS features an ISO 1600 setting that reduces the effects of camera shake and sharpens subjects in lowlight situations, giving you greater shooting flexibility. ISO can be expanded to 3200 when you select ISO 3200 Special Scene mode.

Smart AUTO intelligently selects the proper settings Just set the Canon PowerShot A1100 IS to Smart AUTO and you're ready for maximum enjoyment from your picture taking every time. It's a relaxing and satisfying way to shoot because you can completely concentrate on your subject knowing that the camera has the technical details covered. Advanced Canon technology intelligently analyzes your situation and shooting conditions. Then it automatically selects an appropriate setting from 18 specially defined settings. So whether you're photographing flowers, a captivating sunset, or your friends at the park, you can be confident that you're getting dramatic, memorable images. Shooting Modes Advanced presets for the best possible photos under certain conditions. With 18 Shooting Modes including 9 Special Scene Modes, you're ready for whatever shot comes your way Large, highquality 2.5inch LCD The PowerShot A1100 IS's 2.5inch LCD screen gives you the big picture, whether you're shooting, reviewing or showing off your images. This highresolution screen offers a crisp, clear and bright picture. It also features Night Display for easy viewing in low light. Uses 2 AAsize batteries Conveniently, you don't need to worry about running out or recharging of

batteries. Since AA size batteries can be purchased at any store, simply get new ones locally. Print your own ID photos in up to 28 different sizes or use the Movie Print function to output multiple stills from a recorded movie on a single sheet with a Canon SELPHY Compact Photo Printer. She likes the A1100IS because it has a big LCD screen and it takes AA batteries. She uses rechargables, but I also like the AAs because if my camera battery dies and hers also die, we can get AAs anywhere in a pinch and have at least one camera going. My mother also has this camera and she likes the feel of the camera. The same battery compartment that makes this model bigger than the Elph is a plus in her mind because it gives her something solid to wrap her fingers around. Anyway, other reviews are more in depth, but I have to say one thing about the reviews that say the pictures are out of focus. This is going to sound stupid, but I had the same reaction when we took a few pictures on Christmas morning. I reviewed them on the LCD screen and they were horrible. I thought I got a lemon and was very disappointed. Then I realized there was a nearly invisible plastic protective sheet over the LCD. When I peeled that off, everything was perfect. That may not be what happened to the others who complained about fuzzy photos, but I just wanted to make this clear no pun intended because I almost made a big mistake. So FYI Unlike similar protective sheets Ive seen on a hundred different products I even leave them on my cell phones and such until they peel themselves off, on this camera that sheet is not clear, it makes everything look out of focus and it was hard to detect. In general, it is a good, inexpensive small camera that one can carry in a pocket or purse and takes good pictures for a camera of this price range. It has many options and seems to work well in lowlight situations if you have a steady hand. My wife and I have dSLRs, but I organize a motorcycle group and you just cant use a full sized camera while riding a bike.
