

Carrier weathermaker 9200 repair manual

USER'S INFORMATION MANUAL FOR
THE OPERATION AND MAINTENANCE
OF YOUR NEW GAS-FIRED FURNACE

NOTE TO INSTALLER:
THIS MANUAL MUST BE LEFT WITH THE
EQUIPMENT USER.

WARNING: If the information in this manual
is not followed exactly, a fire or explosion may
result causing property damage, personal in-
jury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
- **WHAT TO DO IF YOU SMELL GAS:**
 - Do not try to light any appliance.
 - Do not touch any electrical switch; do not use any phone in your building.
 - Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
 - If you cannot reach your gas supplier, call the fire department.
- Installation and service must be performed by a qualified installer, service agency or the gas supplier.

SERVICE
WARNING
Before performing service or maintenance operations on unit, turn off main power switch to unit. Electrical shock could cause personal injury.

Service Access — All unit components can be reached through clearly labeled hinged access doors. These doors are not equipped with tiebacks, so if heavy duty servicing is needed, either remove them or prop them open to prevent accidental closure.

Each door is held closed with 3 latches. The latches are secured to the unit with a single 1/2-in. x 20 x 1/2-in. long bolt. See Fig. 36.

To open, loosen the latch bolt using a 7/16-in. wrench. Pivot the latch so it is not in contact with the door. Open the door. To shut, reverse the above procedure.

NOTE: Disassembly of the top cover may be required under special service circumstances. It is very important that the orientation and position of the top cover be marked on the unit prior to disassembly. This will allow proper replacement of the top cover onto the unit and prevent transmittal from leaking into the unit.

IMPORTANT: After servicing is completed, make sure door is closed and relatched properly, and that the latches are tight. Failure to do so can result in water leakage into the evaporator section of the unit.

Cleaning — Inspect unit interior at beginning of each heating and cooling season and as operating conditions require. Remove unit side panels and/or open doors for access to unit interior.

MAIN BURNERS — At the beginning of each heating season, inspect for deterioration or leakage due to corrosion or other causes. Observe the main burner flames and adjust if necessary. Check spark gap. See Fig. 37. Refer to Main Burners section on page 139.

FLUE GAS PASSAGEWAYS — The flue collector box and heat exchanger cells may be inspected by removing gas section access panel, flue box cover, collector box, and main burner assembly (Fig. 35 and 39). Refer to Main Burners section on page 139 for burner removal sequence. If cleaning is required, clean all parts with a wire brush. Reassemble using new high-temperature insulation for sealing.

Select Product Category Just enter the model number below, and we'll give you a list of links to all the documents associated with it. Rather than have you commit them all to memory, we made our model numbers easy to find. If you don't happen to have them handy, you'll also find the model number printed right on the unit. If your heat pump is geothermal, the model information should be easily found on the front of the unit. You should see the model number printed on ratingplate or decal. Still unable to find that model number. Just call your local Carrier Expert. He or she will be happy to help you. Make sure the temperature is set cooler than the current indoor temperature. If it is not running, make sure the breakers in your home's breaker box or electrical panel are in the ON position. Make sure it's in the ON position. If the system is set for cooling, the blower motor should be running. If not, check to make sure your indoor unit switch is in the ON position. If you have oneinchthick furnace filters, a onceamonth change is recommended. If you don't change it, the filter will eventually block the proper airflow and cause your outdoor air conditioner unit to shut down. Return air grilles are larger and are located on a wall or the ceiling in newer homes. Older homes frequently have return air grilles on the floor. NOTE If your system control has a "Constant ON" feature, you will not always feel warmth, even though air may be blowing.

chrishuzzard.com/userfiles/files/8g-ipod-touch-manual.pdf

If it isn't, your system won't know to provide heating. Try turning the fan to ON using the fan switch on the control or thermostat to test for power to the furnace. If you have oneinchthick furnace filters, a onceamonth change is recommended. If you don't change it, the filter will block the proper airflow and strain your furnace. Return air grilles are larger and are located on a wall or the ceiling

in newer homes. Older homes frequently have return air grilles on the floor. NOTE If your system control has a "Constant ON" feature, you will not always feel warmth, even though air may be blowing. Verify that the circuit breakers are ON or that fuses have not blown. If you must reset breakers or replace fuses, do so only once. Contact your Carrier expert for assistance if the breakers trip or the fuses blow a second time. Check air filters for accumulations of large particles. Check for blocked exhaust air grilles or ductwork. Keep grilles and ductwork open and unobstructed. Defrost time could be five to 20 minutes, depending on temperature and settings. With this information, the dealer will be able to correct any problems. Make sure that the condensate drain tube has a slight slope and is not kinked. Provide your model and serial number. With this information, the dealer will be able to correct any problems. Water likely means the support base has shifted since installation and is no longer level. Soak the core in warm water and mild soap for three hours and then rinse under warm not hot water. Use a vacuum cleaner to remove accumulated dust and then handwash in warm water. Filter life varies from home to home and is based on several factors, but most last from eight to 12 months. If your geothermal unit is connected to well water instead of a closed loop, we recommend the heat exchanger inside the unit be cleaned periodically to prevent the buildup of minerals that can reduce system performance.

Schemas Property Value Type URI. Trapped False. They have a great crossreference system. The list price from carrier for their blower motors is way too high. You can just take out the old one and take a look at it to be sure it probably needs a good cleaning anyway. Or stick a digital camera near the blower, and get a picture of the nameplate power off, of course!. Hope this helps. Generally speaking, that's not a part I'd recommend people have a spare unless there is some

particular issue with it. Lennox blower motor I have a Heil Electric furnace. I have looked around and found this forum great, so thank you to everyone. I have had a furnace issue for the past three days. I am in a three floor condo building, 20 units total. I have a Rheem 92% efficiency unit that controls the heat for my unit. It was installed during the rehab of the building in 2006 and I have not had any previous problems. The service people came by and thought the problem was due to ice forming in the PVC intake tube. They checked it out on the roof and were surprised to see that the intake and exhaust tubes faced each other. They theorized this caused the ice to form in the intake. The furnace continually starts but the flame wont ignite. Yesterday it did, very briefly, but then the flame went out after maybe 30 seconds. Today it is back to nothing. Anything I can do about this other than pray for weather above freezing.

I live in Chicago so that may be unlikely for some time. Does the service persons diagnosis make sense. I dont know a lot about it, but I dont quite get the critical importance of the PVC intake. I cant access the entire pipe since it runs through the multiunit building. While the fan motor continues to run, the pilot light will not light. An HVAC technician states that the Smart Valve is bad He installed it in November 2009, by the way, and that four Smart Valves have been installed in the furnace within the past several years. The technician cannot tell me what is causing the Smart Valves to go bad. He only states that I need to replace the furnace. My question, what could cause the Smart Valves to continue to go bad. There has to be something within the furnace or an installation problem that is causing the valves to go bad. HELP!!!! We welcome your comments and All rights reserved. You may freely linkView our Privacy Policy here. There are many. The screw for this piece is on the backside. Once I got over the confusion, about 45 seconds, it was easy. 2 hr reviewing videos cause Im a slow learner. 30 minutes of over analyzing. Good thing the instruction book was still around cause I spent 10 minutes trying to figure how to take off the main door. Lift and pull slightly on my Carrier system. No screws on door. 5 minutes to disassemble. 5 minutes to replace with the new one. Be careful not to touch the metal part. 5 minutes to move wires around. Started and 45 seconds later, the igniter glowed red red red and whoosh. Heat at last. Good thing I bought 2 as I have 2 furnace. Original lasted 14 years. Did not have to disassemble anything except remove front door. These are often installed in hard to reach locations on the furnace so take your time putting it in as these are very, very fragile and dont touch the element itself. They are made to go into a small metal frame that is attached to the furnace.

Sometimes it is easier to put it in the frame first, sometimes it may be easier to leave the small frame in the furnace. Use whichever method will be the most gentler on the element. The box was a brand new Honeywell Q4100C9056. It was a 100% accurate replacement for Norton 271M LH 33Z3004 igniter. Works like a charm! I am going to buy a second one and keep it as a spare. After testing flame sensor with multimeter, it was clear. Old flame sensor readings below normal level. A new one fix it. This particular product was populating in my search even though the compatible part number wasnt listed in the description. Good news is that it does indeed replace J2351501571. I received via 1day shipping today the high here today was 22F and it was an exact fit. Thanks so much. While it is slightly different, i.e., plastic instead of metal, it installed easily and works perfectly. Note that the original had labels on the inlet and outlet and this one doesnt, but the physical locations of the hose connections are the same. The blower motor failed and the condenser iced up over several hours. When the compressor was finally turned off, the ice melted down and shorted out the ICs on the old board from 1987. With this new board, that sort of failure wont happen again, as the integrated circuits on this board are coated in resin on both sides of the circuit board. The relays are rated for more amperage than the original board, and the bussing is much thicker than the original design. I couldnt be more pleased.. full review It showed up and was the genuine part. Shipping was very fast. Heres the advice part. The blower wheel can be EXTREMELY difficult to get off the motor without destroying it. I turned a couple of allen wrenches into pretzels. I even soaked the allen set screw in breakfree penetrating oil and when that didnt work heated it up

until it was cherry red with a with a torch. Even if you could it just takes way too long and is way too much effort.

At very least also buy the blower wheel. Then just cut the old motor shaft with a hack saw just behind the. It fit and works great. I wish I could pay a little bit less for it. I purchased the first one from StayPureFilters and received a Packard branded made in Taiwan motor. The Packard motor seemed to be of cheaper quality than the original and it leaked condensate from the bottom of the housing. I returned the Packard motor and purchased a second one from North America HVAC. The second motor was a Carrier branded made in the USA replacement motor. The Carrier motor appeared to be of better quality and is working without any problems. Fit perfectly. Saved us so much! Great customer service, recommend highly! The second filter had a slight defect one corner was slightly dented, but not dented enough that I could not use the filter. It still fit into the furnace slot for the air filter, but I was a little disappointed with the small defect.
